SECURITY MANAGEMENT PRACTICES

Insightful, real-world reports for meeting today's complex security and business continuity challenges

FREE PREVIEW AVAILABLE

See inside for details

SMP guest authors and contributors are industry practitioners. Many have served in key corporate, academic, or government security advisory positions. Some are active in the security lecture and seminar circuits or teach at the university and graduate school levels. A number have been published in the leading industry and business journals and are authors of several security-related books.

Here's what you get with your SMP subscription ...

- New reports available at our Web site every month covering facility security, IT and network security, financial and legal security, business continuity, biometrics, risk and crisis management, public safety, personnel security, and security technology
- CSO Digest—A weekly electronic news digest summarizing all of the major security industry news, events, and happenings
- Access to all archived reports

Don't put your organization at risk—**be prepared** to **meet security challenges** head-on.

SMP is an informative and lively online resource that delivers a diverse library of compelling, security-oriented reports each month.

SMP reports discuss and dissect the critical topics and issues that matter most in today's around-the-clock, security-conscious world. Here are just a select few:

- Establishing security leadership
- Battling security indifference
- Evaluating public safety warning systems
- Managing document security
- Evaluating worldwide port security
- Selecting email archiving systems
- Conducting physical security audits
- Securing schools and university campuses
- Setting risk management priorities
- Stopping network worms and viruses
- Establishing security best practices
- Establishing mail server security
- Implementing data backup and recovery
- Managing remote access
- Securing voice over IP
- Conducting a business impact analysis
- Complying with security laws and regulations
- Planning for a pandemic
- Deploying digital forensics software
- Protecting customer data
- Complying with the Health Insurance Portability and Accountability Act
- Marrying physical and network security
- Establishing physical security metrics
- Developing proactive security measures
- Identifying alert system alternatives
- Preventing workplace violence
- Evaluating emerging security alternatives
